

Wesley Stanhope, MDS-SD'13, Cert'11
Founder & CEO | Building Evolution Corporation

Wesley (Wes) Stanhope has two decades of leadership experience in the built environment working on both sides of the Atlantic - in the U.S., Ireland, and U.K. - on commissioning, construction, electrification, Deep Energy Retrofit, facility conditions assessments, and energy management projects. Wes has successfully assessed, advised, and commissioned buildings representing both ends of the spectrum including those with significant deficiencies and those with ambitious performance goals.

Wes managed and performed the assessment and commissioning of over 23 million square feet of U.S. Federal Facilities. Wes also has extensive experience managing and implementing assessments and commissioning of large-scale private universities, educational facilities, commercial properties, state facilities, non-profits, and large multifamily developments.

He has broad experience in the Sustainable Design field and in 2017, he founded Building Evolution Cooperation which has quickly grown into one of the leading sustainable building performance consulting firms in greater Boston and is routinely working on 50+ local projects.

Wes has also served as an adjunct faculty member at both Mount Wachusett Community College and the BAC. When not in the office or commissioning a building, he is typically spending time with family and friends, coaching youth soccer, visiting family in Ireland, traveling, or taking a ride on his motorcycle.
